

# Add &

Why??

Look at a number line:

$$\begin{array}{r} 4 + 4 = 8 \\ \hline \end{array}$$
$$\begin{array}{r} 9 + 10 = 19 \\ \hline \end{array}$$
$$\begin{array}{r} -9 + -10 = -19 \\ \hline \end{array}$$

Or, use counters:

$$4 + 4 = 8$$

+++

+++

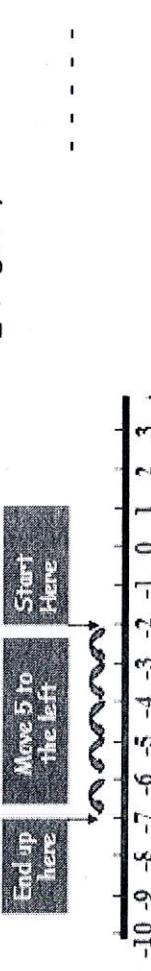

$$48 + 12 = 60$$

$$-48 + -12 = -60$$

Keep  
the  
Sign!

Examples:

$$\begin{array}{r} -2 + (-5) = -7 \\ \hline \end{array}$$

$$48 + 12 = 60$$

$$-48 + -12 = -60$$

Examples:

$$-9 + 10 = 1$$

$$9 + -10 = -1$$

$$-48 + 12 = -36$$

$$48 + -12 = 36$$

Why??

Look at a number line:

Think of a number line.

Example:  $-8 + 12$

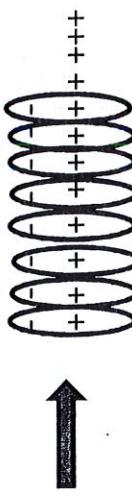

Starting at -8 and adding 12, I will go past 0 on the number line. How far beyond 0 will I be?

Use subtraction to find how far beyond 0.  
 $12 - 8 = 4$ . I will be 4 to the right of 0. So,  $-8 + 12 = 4$ .

Or, use counters:

Absolute  
Value!

$$-8 + 12 = 4$$
